FORWARD

This report, A Statistical Analysis of the World's Merchant Fleet, includes only merchant-type ships of 1,000 gross tons and over. It excludes those operating exclusively on the Great Lakes and such special types as cable ships, icebreakers, trawlers, and those owned by military forces.

Countries having 100 or more merchant ships under their flags of register are shown separately while those having less than 100 ships are grouped under the heading "All Other." The ships in the fleet are divided into four major types:

Passenger/Combination Vessels: Ships with a capacity for 13 or more passengers.

Bulk Carriers: All vessels designed to carry dry-bulk cargo, as well as ore/bulk/oil carriers and other combination bulk/oil, and ore/oil carriers.

Tankers: Crude petroleum, petroleum product, and chemical tankers, LNG and LPG tankers, wine, molasses, and whaling tankers.

Freighters: General cargo carriers, full containerships, partial containerships Roll-On/Roll-Off (Ro/Ro) vessels, and barge carriers.

1) General Cargo Carriers: Include refrigerated and unrefrigerated break-bulk carriers, car carriers, cattle carriers, pallet carriers, and timber carriers.

2) Full Containerships: Ships equipped with permanent container cells with little or no space for other types of cargo.

3) Partial Containerships: Multi-purpose container vessels, where one or more but not all compartments are fitted with permanent container cells, and the remaining compartments are used for other types of cargo. Also includes container/car carriers, container/rail car carriers, and container RO/RO vessels.

4) Roll-On/Roll-Off Vessels: Ships which are specially designed to carry wheeled containers or trailers, and only use the roll-on/roll-off method for loading and unloading. Containers and trailers are stowed on board on their transport wheels.

5) Barge Carriers: Ships designed to carry either barges or containers exclusively, or some variable number of barges and containers simultaneously. Currently this class includes two types of vessels, the LASH and the SEABEE.

DEFINITIONS

Although the shipping terms used in this report are generally understood by those connected with the ocean shipping industry, the definitions given below are intended for clarification.

Gross Tonnage

The internal cubic capacity of the ship expressed in tons (100 cubic feet to the ton) and measured in accordance with the national tonnage regulations.

Deadweight Tonnage

The carrying capacity of a vessel in tons of 2,240 pounds. It is the difference between the light ship weight and the displacement loaded.

Draft

The draft of a vessel is indicated in feet and is the vertical distance between the waterline and the keel. The draft shown in this report is full-load draft.

Speed:

The speed of a ship is expressed in knots; one knot is one nautical mile (6,080.27 feet) per hour.

Primary Sources:

U.S. Maritime Administration
American Bureau of Shipping
Lloyd's Register
